

## **KPCA walks Harrison's Pond area to collect more data**

KPCA Environmental committee members Dorothy Chanin and Steve Weber along with 1<sup>st</sup> VP Sean Lehmann walked the Harrison's Pond area to collect more information that will help us determine whether or not conditions are positive for the restoration of Harrison's Pond. The feeder creek, runoff areas and the pond itself was the focus of our walk. Erosion towards St. Johnland Road was noted as a result of the dam being destroyed. New plants and weeds growing in the pond area were identified. Data was also collected along the creek that feeds the pond. Small feeder fish called killies were noted swimming in the creek. The sewer system throughout the San Remo area that empties into the creek was inspected. Ways of eliminating contamination and chemical runoff that damages the creek were investigated. A full report will be made available to both the Kings Park Civic Association and San Remo Civic Association memberships.
